The Situation

Mobile phones are essential for communication, entertainment, and daily tasks, but battery life remains a major limitation. In situations without access to outlets or power banks, such as remote areas, travel, or emergencies, phones can become unusable.

According to ANKER:

68% report their phone dies weekly, with 31% reporting daly phone deaths

56% report that they dont charge their phone until it's <20%

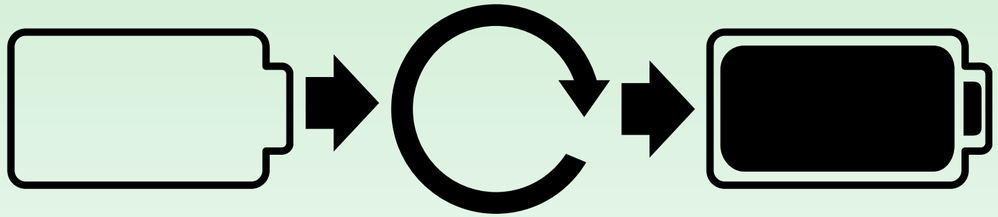

The Solution

We developed a compact, user-powered Handheld Phone Charger for situations where traditional charging options aren't available. The device provides a reliable, lightweight charging solution that doesn't rely on outlets or power banks, and it includes real-time tracking of output voltage and user RPM.

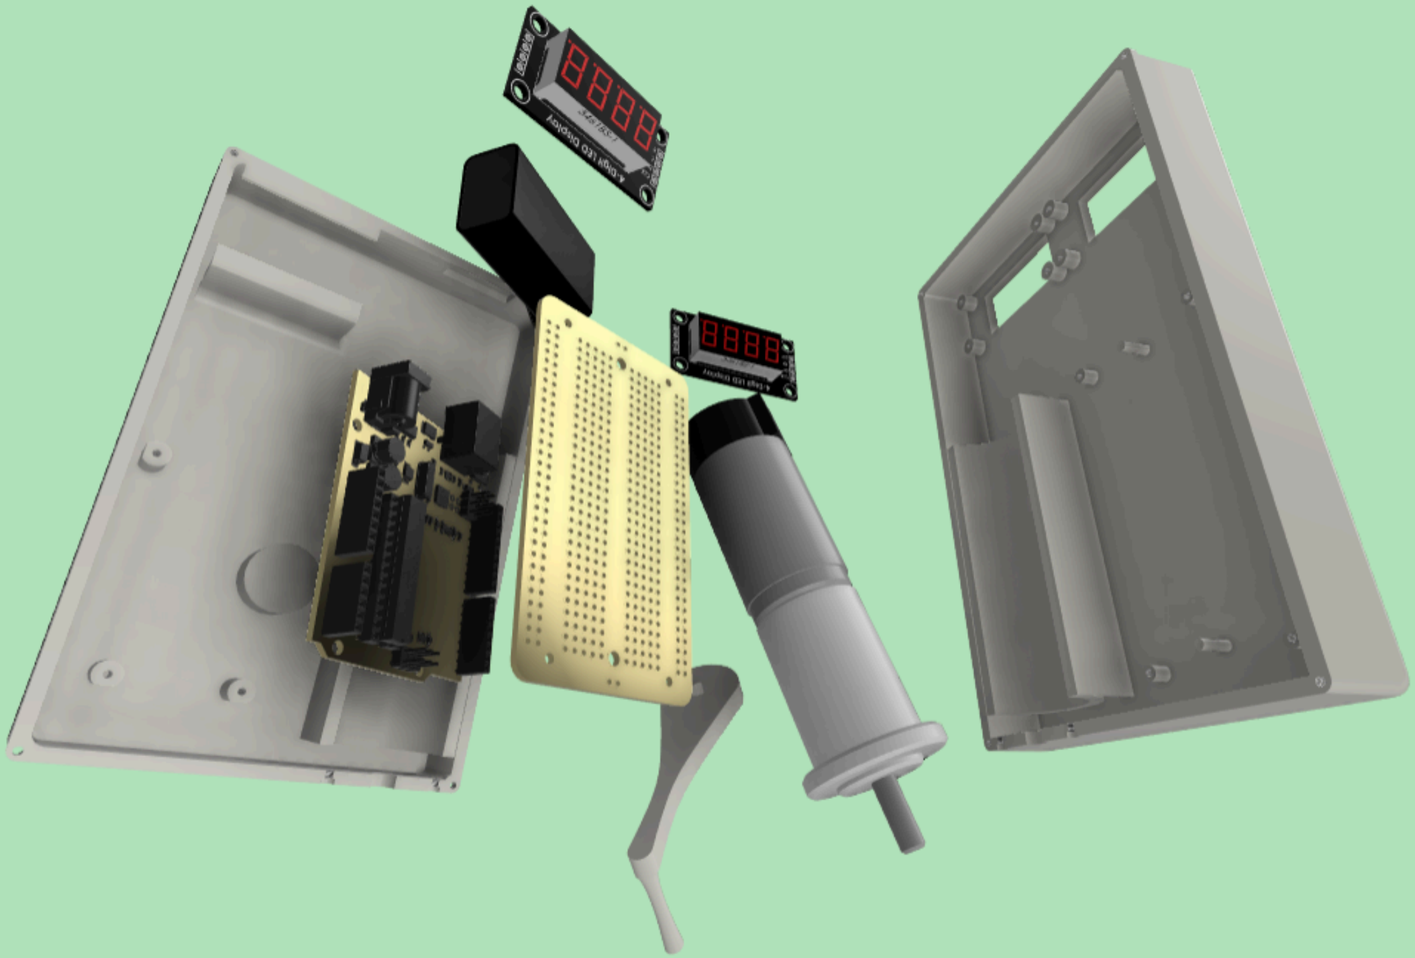

The Specs

- 12V DC Motor Generator
- Arduino Uno Powered Sensory System
- Live LED Wattage Output Display
- Live LED RPM Input Display
- 5V Regulation
- 20+ Wattage Output
- Sturdy 3-layer PLA Outer Shell

Drain. Crank. Charge.
